Subject: public comment on federal register

this toxic chemical should remain listed as a carcinogen.

none of this toxic chemical should ever be allowed in any vaccine as a preservative, neither for people nor for animals.

i object to the planned closed non transparent meetings at the final stage on this toxic pollutant. i also object to the revolving door that is present between agency employees who give bonuses to toxic chemical profiteers and then take jobs with these same toxic chemical profiteers a short time later and believe we need to prevent that with a 5 year period during which no such transplation can take place.

this revolving door hurts all americans health status and represents nothing but greed and avarice for employees at govt agencies and profiteer toxic chemical producers.
